DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, 21-40, 73 and 74, drawn to a prosthesis for extravascular remodeling, classified in class 623, subclass 2.36.
- II. Claims 18-20, 41-72, drawn to surgical method of mitral annuloplasty, classified in class 128, subclass 898.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product. The prosthesis of Group I may be used in ligament reconstruction, and therefore, does not exclusively have to be used for the method of Group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

Art Unit: 3738

- 1) Figures 8 and 9 show the embodiment of the first species.
- 2) Figures 10 and 11 show the embodiment of the second species.
- 3) Figures 12 and 13 show the embodiment of the third species.
- 4) Figure 14 shows the embodiment of the fourth species.
- 5) Figure 15 shows the embodiment of the fifth species.
- 6) Figure 16 shows the embodiment of the sixth species.
- 7) Figure 17 shows the embodiment of the seventh species.
- 8) Figure 18 shows the embodiment of the eighth species.
- 9) Figures 19 and 20 show the embodiment of the ninth species.

If applicant elects Group II, then applicant is also required to elect a single subspecies as set forth below:

Surgical Method

- A) reducing mitral valve annulus circumference
- B) transluminal mitral annuloplasty
- C) providing a medical device
- D) providing a therapeutic compressive force
- E) limiting diastolic expansion

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species and subspecies (ex. Group I, species 4 OR Group II, species 7, subspecies A) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims are generic.

Art Unit: 3738

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
